*** Final Report ***

PROCEDURE: JCT CT ABDOMEN PELVIS W CONT

DATE OF EXAM: Oct 23 2012 12:29PM

RMS ORDER NO:

CPT(s): 74177

ADMITTING DIAGNOSIS: COMMUNITY ACQUIRED PNEUMONIA

REASON FOR EXAM: Abdominal Pain

RESULT:
CT ABDOMEN AND PELVIS WITH CONTRAST

INDICATION: [Abdominal Pain].

COMPARISON: October 21, 2012.

TECHNIQUE: Contiguous axial images were performed from the diaphragm to the pubic symphysis with spectral enteric contrast. 80 ml Optiray 350 were injected intravenously.

FINDINGS: atelectasis in bilateral lung bases.

Liver and spleen are enlarged. Pancreas is normal. Gallbladder is contracted. Adrenal glands and kidneys are normal. No aneurysm of the abdominal aorta. 2.4 x 1.5 cm lymph node is present along the porta hepatis adjacent to the pancreatic head. Superior to the pancreas is a 1.5 x 1.1 cm lymph node. Multiple retroperitoneal lymph nodes measuring less than 1 cm in size.

The bowel appears unremarkable. The appendix is not identified. Small amount free fluid along the right flank. No inflammatory changes in the right lower quadrant.

No free air.

IMPRESSION:

1. Multiple lymph nodes along the pancreatic head.
2. Small amount free fluid in right flank.
3. Hepatosplenomegaly.
